

Forty 4 Frankie

A fundraising campaign to install 40 life saving Automated External Defibrillators (AED) in Portsmouth.

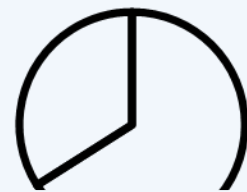

Please donate whatever you can.

72%

Of cardiac arrests occur in the home.

15%

Of cardiac arrests occur in the workplace.

70%

AED used within 5 mins survival rate 50% – 70%

In the event of a cardiac arrest quick access to an AED is crucial.

20%

Survival rate falls to just 20% after 10 mins

An AED, or automated external defibrillator, is used to help those experiencing sudden cardiac arrest.

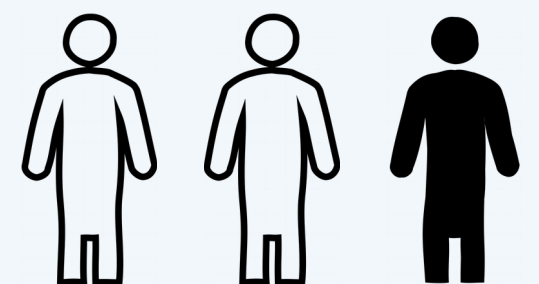

98%

Most cardiac arrests occur in adults (98%)

1/10

Public access defibrillator use is reported as being used in less than 1 in 10 out-of-hospital cardiac arrests.

It is recommended that a defibrillator should be readily available within 300 metres of a cardiac incident to allow collection and use within 6 minutes of the person collapsing for maximum effect.

40 years ago this year that my Mum, **Frances Morey**, died after a cardiac arrest in the street at the age of just 46. I understand that she received defibrillation from the ambulance crew but unfortunately it was too late.

As well as having more defibrillators near Portsmouth homes, for maximum impact we also need to raise awareness of where this equipment is located and increase confidence in administering first aid and the use of a defibrillator.
